平成 16 年度 電気回路·電子回路

1.

(2)
$$P_{a} = R_{L} \cdot |\dot{I}|^{2}$$

$$= R_{L} \cdot \frac{\dot{E}^{2}}{(R_{S} + R_{L})^{2} + (X_{S} + X_{L})^{2}}$$

$$(1) \dot{J}') \dot{X}S = -X_{L} \dot{S}''$$

$$P_{a} = \frac{R_{L} \dot{E}^{2}}{(R_{S} + R_{L})^{2}} = \frac{R_{L} \dot{E}^{2}}{R_{S}^{2} + 2P_{S}P_{L} + R_{L}^{2}} = \frac{\dot{E}^{2}}{R_{D}^{2} + 2P_{S}P_{L} + R_{L}^{2}}$$

分母最小の時 P_a は最大となかので $Y = \frac{R^2}{P_L} + 2Rs + R_L$ とおくと

$$y' = -\frac{Rs^2}{R_L^2} + 1 = 0$$
 of $R_L = 0$ of $R_L = 0$ such that $Rs^2 - R_L^2 = 0$ such that Rs^2

 $R_L = R_S \ \mathcal{E}_S \ \mathcal{E}_S$

(3)
$$\dot{E} = \{R_S + R_L + \dot{\delta}(X_S + X_L)\}\dot{I}_L$$

 $\dot{E}_L = \{R_L + \dot{\delta}X_L\}\dot{I}_L$
 $\vdots \dot{E} = e^{i\frac{\pi}{2}}\dot{E}_L \times \dot{\delta}i)\dot{\delta}o\dot{T}$
 $\{R_S + R_L + \dot{\delta}(X_S + X_L)\}\dot{I}_L = (\cos\frac{\pi}{3} + \dot{\delta}\sin\frac{\pi}{3})(R_L + \dot{\delta}X_L)\dot{I}_L$
 $R_S + R_L + \dot{\delta}(X_S + X_L) = (\frac{1}{2} + \dot{\delta}\frac{13}{2})(R_L + \dot{\delta}X_L)$
 $R_S + R_L + \dot{\delta}(X_S + X_L) = \frac{1}{2}R_L - \frac{13}{2}X_L + \dot{\delta}(\frac{1}{2}X_L + \frac{13}{2}R_L)$
 $\begin{cases} R_S + R_L = \frac{1}{2}R_L - \frac{13}{2}X_L & \rightarrow R_S + \frac{1}{2}R_L + \frac{13}{2}X_L = 0 \end{cases}$
 $X_S + X_L = \frac{1}{2}X_L + \frac{13}{2}R_L \rightarrow X_S + \frac{1}{2}X_L - \frac{13}{2}R_L = 0$

:.
$$R_S = -\frac{1}{2}(R_L + \overline{13}X_L)$$
, $X_S = -\frac{1}{2}(X_L - \overline{13}R_L)$
